FW: App Store Connect: Your app "Maritime Global News" (Apple ID: 529419615 Version: 3.0.0 Build: 3.0.0) has one or more issues
To 'Mark O'Malley'

App Store Connect

Dear Developer,

We identified one or more issues with a recent delivery for your app, "Maritime Global News" 3.0.0 (3.0.0). Your delivery was successful, but you may wish to correct the following issues in your next delivery:

ITMS-90078: Missing Push Notification Entitlement - Your app appears to register with the Apple Push Notification service, but the app signature's entitlements do not include the 'aps-environment' entitlement. If your app uses the Apple Push Notification service, make sure your App ID is enabled for Push Notification in the Provisioning Portal, and resubmit after signing your app with a Distribution provisioning profile that includes the 'aps-environment' entitlement. Xcode does not automatically copy the aps-environment entitlement from provisioning profiles at build time. This behavior is intentional. To use this entitlement, either enable Push Notifications in the project editor's Capabilities pane, or manually add the entitlement to your entitlements file. For more information, see

https://developer.apple.com/library/content/documentation/NetworkingInternet/Conceptual/RemoteNotificationsPG/HandlingRemoteNotifications.html#//apple_ref/doc/uid/TP40008194-CH6-SW1.

After you've corrected the issues, you can upload a new binary to App Store Connect.

Best regards,

The App Store Team
